

Dexter Brylle Matos

Site Reliability Engineer | Manila, Philippines
dexterbrylle@gmail.com | +63977-8211413

Professional Summary

Highly analytical **Site Reliability Engineer and Technical Lead** with over **13 years of experience** bridging the gap between deep software development and enterprise-scale infrastructure. Currently specializing in **Observability-as-Code** and **AI-driven reliability** at Macquarie Group, I have a proven track record of reducing production incidents by 95% and automating complex CI/CD pipelines. Expert in **multi-cloud environments** (GCP, Azure, AWS) and container orchestration (K8s/AKS/GKE), with a foundational background as a **Senior Software Engineer** and **L3 Technical Lead** focused on microservices architecture and application security.

Professional Experience

Macquarie Group | Site Reliability Engineer *February 2025 – Present*

- **Observability-as-Code:** Manage and maintain enterprise-wide Dynatrace Monaco (Configuration as Code) for banking and financial systems, covering log metrics, log processing rules, custom dashboards, browser-synthetics, and complex monitoring workflows across multi-cloud environments.
- **Automated Release Verification (ARV):** Designed and implemented **ARV**, an internal platform for intelligent service discovery and automated release verification, utilizing DQL (Dynatrace Query Language) and Davis AI for auto-adaptive threshold evaluation, significantly reducing deployment validation time.
- **AI-Driven Reliability:** Developed and maintains the ARV Support Agent, a multi-agent AI system built with Google Agent Development Kit to analyze release failures and reduce alert fatigue through hierarchical agentic decision-making.
- **Cloud Infrastructure & Provisioning:** Design, provision, and maintain the SRE-Release Engineering team's GCP ecosystem, including GKE containers, Spanner databases, Pub/Sub, HashiCorp Vault, and Vertex AI using Terraform.
- **Security Governance:** Act as the primary liaison for the security team, owning and executing comprehensive *Security Assessment Documents* required for production releases to ensure compliance and risk mitigation.
- **AI Innovation:** Pushed for Proof of Concept (POC) initiatives for AI agents to leverage machine learning in improving system reliability and quality.

Manulife IT Delivery Center Asia Inc. | Technical Lead / Senior Backend Engineer *June 2021 – September 2024*

- **Multi-Cloud Infrastructure:** Managed Azure cloud infrastructure for MOVE app, including AKS container orchestration, Azure Key Vault secret management.

- **Security Governance:** Acted as the primary liaison for the security team, performing *SAST and DAST* scanning using *SonarQube, Snyk, and Burp Suite* in addition to crafting comprehensive Security Assessment Documents.
- **MOVE app:** a mobile app that promotes healthy lifestyle by enabling members to track their progress against set fitness goals. Actively contribute to the development and maintenance of API microservices, writing clean, efficient, and maintainable code on a daily basis.
- **Deployment Excellence:** Eliminated deployment-related downtime and vulnerabilities by transitioning the production environment to *Blue-Green deployment* strategies.
- **Problem Management:** Reduced production incidents and problem records by **95%** through rigorous site reliability and engineering-led analysis.
- **Observability:** Developed and maintained a comprehensive New Relic monitoring dashboard, alerts, and synthetic monitors for proactive oversight.
- **Report Automation:** implemented reporting and data management automations for better data-driven decision making.

Finastra | Expert Software Engineer *February 2019 – August 2020*

- Directed architecture transformation to *Kotlin Multiplatform* and maintained internal banking applications using Java, Angular, and DB2.
- Architected and implemented innovative solutions, including a company-wide ride-sharing platform and a Facebook Messenger chatbot.

Make Technology | Lead Developer *February 2018 – January 2019*

- Architected and led the development of a robust yoga booking and certification web app for international clients.
- Optimized CI/CD pipelines and server environments, enhancing infrastructure reliability and development efficiency.

Early Career and Other Positions

Emapta Philippines (*Oct 2024 - Jan 2025*) - Consultant - Senior Software Engineer

Indra Philippines (*Jan 2021 - Apr 2021*) - Consultant - Solution Architect

Cambridge University Press (*May 2017 - Dec 2017*) - Senior Software Engineer

Wunderman-Thompson (*Oct 2013 - May 2017*) - Senior Developer

IBM Business Services (*Aug 2012 - Feb 2013*) - Web Developer

Technical Skills

- **Cloud & Orchestration:** Google Cloud Platform (GCP), Microsoft Azure, Amazon Web Services (AWS), Kubernetes (GKE/AKS), Docker, Github, Bitbucket.
- **Observability & Monitoring:** Dynatrace (Monaco, DQL, Davis AI), SumoLogic, Datadog, New Relic, DEVO, Grafana, Prometheus.
- **DevOps & Automation:** Github Actions, Bitbucket Pipelines, Jenkins, Git.
- **AI & Languages:** Typescript/NodeJS, Python, Go, Vertex AI, Google Agent Development Kit.

- **Security Tools:** Snyk, SonarQube, Burp Suite, HashiCorp Vault, Metasploit.
- **Operating Systems:** Linux (Ubuntu, Debian), Windows, MacOS.

Education

- **Bachelor of Science in Information Systems** | De La Salle - College of Saint Benilde.

Continuous Learning & Lab Environment

- **Advanced Homelab Infrastructure:** Maintain a **Proxmox/K3S/Docker** environment to test new architectures, container orchestration strategies (Kubernetes mini-clusters), and security concepts learned from ongoing certifications.
- **Security Certifications:** Ongoing security certification for further professional development
